Undergraduate, Data Science & Humanities Applications

I feel fortunate to have worked for MOTI's Comms and Data Science teams. I've observed how **data-driven public sector work that prioritises equity necessitates collaboration**, and effective systems to manage and sustain these efforts.

- **Streamlined data science processes** to help make collaborating on and documenting technical projects easier.
- **Set-up infrastructure** for MOTI's data equity team to start publishing content and data documentation work on a portfolio library.
- Consulted government service owners, and **created preliminary metrics and dashboards** to assist their capacity to leverage data in operations.
